

## How to use Cpp2Java (Windows)

For Data Structures and Algorithm Analysis students and lab assistants

1. Open Cpp2Java.jar and keep it up in the background
2. Open Microsoft Visual Studio
3. Copy Cpp2Java.h into your project directory
4. Write at the top of your C++ code: **#include "Cpp2Java.h"**
5. Write your C++ code (see examples and API)
6. Compile and run your C++ code (Ctrl+F5 in Visual Studio)
- 7. Switch back to Cpp2Java to see your changes**
8. If you want to make changes again, close the cmd prompt but keep Cpp2Java open. Make your code changes, then compile and run again.
9. If you have a problem, try closing Cpp2Java and re-opening it.
